                                                                                                                                                                                                                                                                                                                                                           The present invention provides the crystal structure of the oligomerisation domain of the rotavirus non-structural protein 4 (NSP4). Rotavirus is a major cause of gastroenteritis, and the structure can be used to construct peptides useful in vaccines to protect against infection. The present sequence is a fragment of a rotavirus NSP4 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel crystal of oligomerization domain of rotavirus nonstructural protein 4, useful for determining 3 dimensional crystal structure of the domain that is used for identifying agents which interact with the

                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                     Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic CC polypeptides. The proteins and their associated DNA sequences are used in CC the treatment, prevention and diagnosis of medical conditions caused by CC P. acnes. The disorders include SAPHO syndrome (synovitis, acne, CC P. acnes is also involved in infections of bone, joints and the central CC nervous system, however it is particularly involved in the inflammatory CC lesions associated with acne vulgaris. A method for detecting the CC presence or absence of P. acnes in a patient comprises contacting a CC sample with a binding agent that binds to the proteins of the invention CC and determining the amount of bound protein in the sample. The CC polypeptides may be used as antigens in the production of antibodies pecific for P. acnes proteins. These antibodies can be used to CC downregulate expression and activity of P. acnes polypeptides and CC diagnostic agents for determining P. acnes proteins. The antibodies may also be used as CC diagnostic agents for determining P. acnes presence, for example, by CC enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was contacton electronic format directly from WIPO at

             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB 80

Nucleic Acids Res. 30:3927-3935 (2002).

PUNCTION: Associates with free 30S ribosomal subunits (but not refunction).

With 30S subunits that are part of 70S ribosomes or polysomes).

Essential for efficient processing of 16S rRNA, May interact with Essential helix region of 16S rRNA (By similarity).

The 5'terminal helix region of 16S rRNA (By similarity).

-1- SUBCELLULAR LOCATION: Cytoplasmic (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EMBL; AP004598; BAC13556.1; -.

J. Biol. Chem. 257:13081-13087(1982).
I-FUNCTION: This is the heme A-containing chain of cytochrome coxidase, the terminal oxidase in mitochondrial electron transport.
I-CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Johnston M., Andrews S., Brinkman R., Cooper J., Ding H., I Du Z., Favello A., Fulton L., Gattung S., Geisel C., Kirste Kucaba T., Hillier L.                                                                               C + 2 H(2)O.
SUBUNIT: Composed of at least 11 subunits.
SUBCELLULAR LOCATION: Mitochondrial inner membrane.
SIMILARITY: Belongs to the cytochrome c oxidase Va family.
                                                                                                                                                                                                                                                                                                                      or I., Tsugita A.; amino acid sequence of cytochrome
